

Stay a Step Ahead of Application Management Challenges

Now you can:

- Maintain your application readiness and security upgrades
- Continue to identify and mitigate application issues before pulling the deploy trigger, with no surprises
- Use a single process to build, customize and test the delivery of physical, virtual and mobile applications
- Reduce operational risk caused by compatibility issues
- Create custom deployments without repackaging

What you get

Continue to make short work of updates, new software releases, virtualization and other application deployment chores. Your Windows 10 migration may be underway or successfully completed. But your organization's ever-growing IT needs require you to maintain a comprehensive application readiness solution. AdminStudio 2019 ensures you're ready to effectively manage whatever's next.

Our latest version also enables automated batch conversion for the new MSIX format. Upgrading to AdminStudio 2019 makes sense given all that lies ahead for your organization.

Fast, consistent deployments

With a robust set of PowerShell cmdlets, AdminStudio 2019 can significantly speed up the process of application packaging and deployment, including:

- EXE wrapping
- injection of customizations
- vendor command line suggestions

Fix compatibility issues and reliably convert to any format

The complex process of fixing compatibility issues, packaging and converting applications to the desired deployment format is automated. So you can quickly prepare applications on a daily basis, and continue ongoing migrations and virtualization efforts.

Standardizing your software packaging allows you to reliably package applications with much higher quality. And your software deployment to desktops will be virtually 100% successful.

By unifying application management with one tool and one process regardless of deployment format, you'll reduce application sprawl and accelerate adoption of:

- virtualization
- cloud computing
- mobile apps
- Mac applications
- the next Windows OS update

Update to AdminStudio 2019 and your IT will maintain application readiness in an environment of rapid and constant change.

You're ready to take on the toughest application challenges

Reliable application packaging and deployment

Handle frequent tasks by automating packaging with PowerShell cmdlets. Execute advanced packaging, customization and authoring with the full power of InstallShield, the industry's leading setup authoring tool. And save time by distributing applications directly to leading software deployment tools.

Maintain mobile application readiness

Identify risky applications and establish BYOD and blacklist policies. Validate whether applications follow best practices and conform to enterprise policies. And automate OS compatibility testing for error-free deployment.

The screenshot displays the AdminStudio 2019 interface. On the left, the 'Products' pane shows a list of applications under 'Sales', with 'Google Earth (v4.1.7076.4458)' selected. The main pane shows the 'Supportability Risks' report for Google Earth, including a summary table of test categories and their overall assessments.

Test Category	Overall Assessment
Operating System Compatibility	⚠️
MSIX Conversion Compatibility	✅
Desktop	✅
Application Virtualization Compatibility	⚠️
Microsoft App-V 4.x	⚠️
Microsoft App-V 5.x	⚠️
VMware ThinApp 4.x	⚠️
VMware ThinApp 5.x	⚠️
Citrix XenApp Profile	⚠️
Remote Application Publishing Compatibility	❌
Remote Desktop Services Tests	❌
Risk Assessment	✅
Windows Desktop Risk Assessment	✅
Best Practices	❌
Windows Installer Internal Consistency Evaluators	❌
Windows Installer Best Practices	✅
Application Conflicts	✅
Windows Installer Conflicts	✅

Simplify Mac application management

Bring Mac OS into the enterprise by standardizing on compatibility, best practices and risk assessment. Deliver Mac applications to JAMF suite.

Ongoing application management

Maintain continuous application readiness even after your Windows migration is complete. You'll gain insights to efficiently deploy quality.

Simplify application compatibility and Windows migrations

Make life easier for users. Fix incompatibilities before rolling out applications. Migrate to Windows 10 with confidence by ensuring your apps will work well together when deployed to the same systems. AdminStudio 2019 can check the compatibility of applications against various versions of Windows 10. Understand the impact of Java updates through reports that expose Java dependencies, including which versions may be at end of life.

Accelerate application virtualization

Quickly identify which applications are not candidates for virtualization and get reports on fixes required for conversion. Directly edit application virtualization packages. And save time by automatically virtualizing applications into your format of choice.

Reduce security risk

Enjoy simple functional and security updates. You'll get a logical starting point for all security update activities. You also get a central location for analyzing and reporting on packages, as well as testing and wrapping applications for deployment. And keep applications up to date by quickly and easily leveraging vendor setups to mitigate vulnerabilities.

NEXT STEPS

Contact your customer success rep today and upgrade to AdminStudio 2019.

ABOUT FLEXERA

Flexera helps executives succeed at what once seemed impossible: getting clarity into, and full control of, their company's technology "black hole." From on-premises to the cloud, Flexera helps business leaders turn IT insight into action. With a portfolio of integrated solutions that deliver unparalleled technology insights, spend optimization and agility, Flexera helps enterprises optimize their technology footprint and realize IT's full potential to accelerate their business. For over 30 years, our 1300+ team members worldwide have been passionate about helping our more than 50,000 customers fuel business success. To learn more, visit flexera.com
