

» TECHNOPEDIA DATASHEET

The asset info you need for smarter, faster IT decisions

» AT A GLANCE

You need to efficiently and effectively manage IT assets. That calls for the most up-to-date, high quality information available, which is what Flexera's Technopedia delivers. Updated daily, Technopedia is the world's most expansive enriched technology catalog and is categorized and aligned to bring you the data you need to make well-informed IT decisions.

Easy access to essential information

With Flexera's Technopedia, you'll be able to quickly find your software and hardware manufacturers including the models, supported OS's, editions, platforms, releases, versions and suites. Technopedia, curated by a dedicated team at Flexera, boasts over 250 million data points with more than 4,500 daily updates, including over 2 million software releases and 3.7 million hardware models, ensuring the highest level of data accuracy.

Intelligence to make smarter, faster decisions

More than just inventory, Technopedia houses over 1 million product use rights to ensure you get the most value from your software licensing possible. With over 6,600 product use right templates, you can apply the best licensing option in just a few clicks.

Technopedia offers features that include a media library to be used in conjunction with your CMDB and additional data packs that allow you to add market intelligence to your private libraries for procurement research.

» NOW YOU CAN

- Easily access IT asset data through clear, concise and shareable dashboards
- Get current, consistent and accurate information on enterprise software and hardware
- Make best-case business decisions based on highly accurate analysis

The Technopedia data factory

The precise and accurate data you need is a product of the Technopedia data factory. It's the infrastructure Flexera built to create, curate and manage data and is a combination of refined tools, automation and human processes.

How quality data is delivered

1. Data capture

Technical researchers from Flexera operate automated collection tools, monitoring manufacturer websites and blogs for event-driven information about software and hardware products. Data can also be added through interaction with customers who are already using Technopedia. This can take the form of customer requests for enhancements, or by adding data to Technopedia.

2. Curation

A team of Flexera curation analysts determines whether the new data belongs in Technopedia, where it fits within the Technopedia taxonomy and what supplemental market data can be added to enhance the new data.

3. Quality assurance

When the curation process is finished, the new data is thoroughly examined by a quality assurance team, which checks for typos, spelling, grammatical errors, duplicates, inconsistencies and missing data.

4. Technopedia

At this point, the certified data is integrated into Technopedia. Once deployed, additions or corrections to the data can be provided by users. These are forwarded to Flexera curation analysts who determine how the new information fits within the Technopedia framework.

Hobson & Company, a third-party research firm, recently heard from customers that Flexera's Data Platform, in which Technopedia is a major feature, can help them make more strategic decisions, reduce their IT costs and minimize their risk exposure.

“

We have leveraged Data Platform to help discover thousands of additional entitlements (that we previously didn't know existed), and ultimately saved millions of dollars.”

Technical Manager

About Flexera

Flexera helps organizations understand and maximize the value of their technology, saving billions of dollars in wasted spend. Powered by the Flexera Technology Intelligence Platform, our award-winning IT asset management, FinOps and SaaS management solutions provide comprehensive visibility and actionable insights on an organization's entire IT ecosystem. This intelligence enables IT, finance, procurement and cloud teams to address skyrocketing costs, optimize spend, mitigate risk and identify opportunities to create positive business outcomes.

More than 50,000 global organizations rely on Flexera and its Technopedia reference library, the largest repository of technology asset data.
