

FlexNet Manager for Data Centers

Complete Data Center Software License Optimization Solution

BENEFITS TO YOUR ORGANIZATION

Organizations deploying the FlexNet Manager for Data Centers can realize many business benefits:

- Optimize license consumption and reduce ongoing software spend
- Reduce the time and effort managing licenses and demonstrating compliance for software audits
- Accurately plan and budget for future needs
- Gain continuous control of the software estate with repeatable, automated, best practice SAM process

Software License Optimization = Software Savings and Compliance

Software is one of the major items on IT expense budgets. Industry analysts estimate that software license and maintenance fees represent 20 to 35% of total enterprise IT spend. Not only are server applications from major vendors— IBM®, Microsoft®, Oracle®, Symantec™ and VMware®—strategic to businesses, they also represent the vast majority of an enterprise's software spend.

In a large, dynamic data center it can be difficult to identify all software installed. Traditional licensing concerns installations and features of the physical or virtual server in which it is installed, but data center licensing models today go beyond the actual physical or virtual machine on which the software is installed.

With the advent of software running in the Cloud and “Container” solutions becoming more popular, visibility into those assets could expose your most valued business critical applications to significant risk/cost.

Enriching the Data that Matters the Most

Normalized and enriched Inventory is the critical first step in business processes that eliminate manual effort, improve software security, maintain license compliance and reduce software costs.

The normalized and enriched inventory provides the essential data center discovery, application recognition and normalization capabilities that allow organizations to easily realize Software License Optimization.

Software License Optimization

FlexNet Manager for Data Centers is the next generation server software asset management and license optimization solution that analyzes inventory, application usage, purchase order data, license entitlements, and contract terms to optimize license consumption in dynamic, complex environments, making sure license compliance is not negatively impacted.

FLEXERA CONTENT LIBRARY

SKUs in the library:

1,626,960

across 392 publishers
