

Compliance Intelligence without the complexity

Compliance requires constant readiness

Regulators expect continuous proof of lifecycle governance, risk reduction, and audit readiness; but only 36% of IT leaders have complete visibility into the IT estate.¹

Most organizations still rely on manual processes to get there. This creates gaps that increase risk, slow responses, and make it hard to demonstrate progress in a way regulation trusts.

What's holding readiness back:

- Compliance is not just point-in-time status
- Limited visibility into EoL/EoS risk and progress over time
- Evidence is spread across spreadsheets, tools, and teams
- Lack of single, executive-ready view of compliance posture

How to succeed, consistently:

One unified view

Manage regulations like DORA, NYDFS, APRA and FFIEC frameworks with clear visibility into current and upcoming compliance exposure.

Continuous tracking

Of risk reduction and lifecycle progress with a system of record for compliance both internal and external.

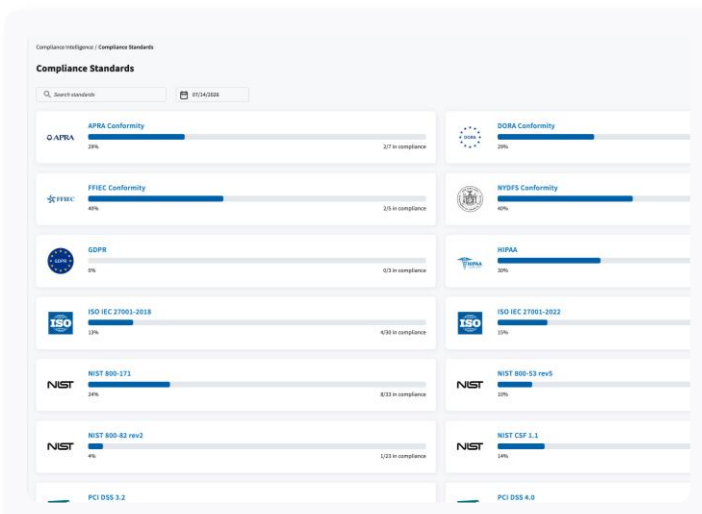

Auditor-ready evidence

With asset-level drill-down and built in tracking for exceptions, ownership and decision-making; explain progress with authority.

¹ 2026 Flexera State of ITAM Report

Drive down risk, drive up data dependability

Vigilant compliance, powered by trusted intelligence and delivered conveniently:

Dependable, complete data powered by Technopedia

Compliance built in, not bolted on

Built to deliver for regulators, GRC and executives

Continuous governance, not reactive reporting

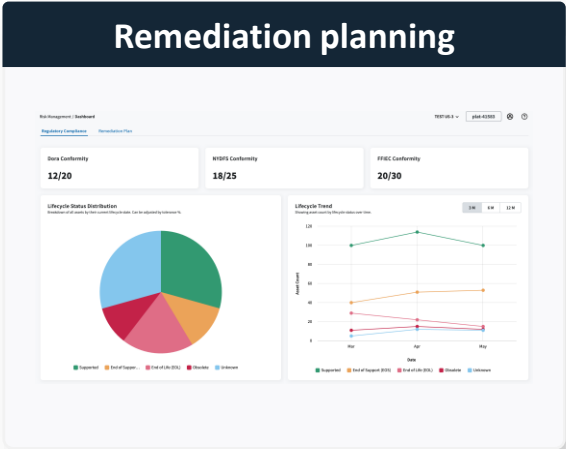

➤ Compliance Standards Intelligence features

Flexera uniquely delivers Compliance Standards Intelligence built on unparalleled technology intelligence, transforming trusted IT Visibility data into more than reporting, but a complete asset compliance management experience.

- Unlike competitors that rely on outdated CMDB data or require extensive customization, Flexera provides normalized, enriched, and continuously updated intelligence that directly supports internal and regulatory requirements.
- From any host, teams can take action, including creating tickets, prioritizing remediation efforts and triggering automation workflows, all with full auditability and traceability.

“Managing compliance across multiple regulations is complex. Flexera delivers the depth and visibility we need to meet requirements with confidence.”
