

Complete IT asset intelligence for government agencies

Gain a defensible license position, reduce software spend and achieve mission-ready data quality by combining the power of FlexNet Manager Suite and Data Platform

» AT A GLANCE

Federal, civilian, defense and intelligence agencies managing sprawling, complex IT environments are under constant pressure to cut costs, maintain compliance and reduce cyber risk. Flexera's FlexNet Manager Suite (FNMS) and Data Platform work together as a complete on-premises solution. FNMS optimizes software license compliance and spend, while Data Platform aggregates, normalizes and enriches your hardware and software data with critical lifecycle and contextual information using [Technopedia](#), the world's largest and most comprehensive technology data reference catalog.

Together, they give your agency a holistic, trusted source of truth to power better decisions, stronger audit defense and align with federal mandates like FITARA, Zero Trust and executive orders.

Agencies report dramatic results with Flexera:

One large federal agency estimates a 3-year cost reduction of more than \$20 million across IT rationalization, security, and asset management.

A federal civilian agency saved more than \$10 million optimizing Microsoft SQL Server licenses.

Another agency used Flexera to change a FITARA software licensing score from "F" to "A."

Use cases

Optimize software license compliance

Reconcile entitlements with actual usage to maintain a defensible license position for audits, true-ups and renewals across vendors like Microsoft, Oracle and IBM

Normalize and enrich IT asset data

Aggregate data from discovery tools, SCCM, Tanium, BigFix, BMC and other sources into a single, clean and consistent inventory using Technopedia normalization

Assess vulnerability and EOL risk

Detect and identify end-of-life (EOL), end-of-support (EOS) and vulnerable assets with [Secunia Research](#) threat intelligence, supporting Zero Trust and cyber hygiene mandates

Clean your CMDB

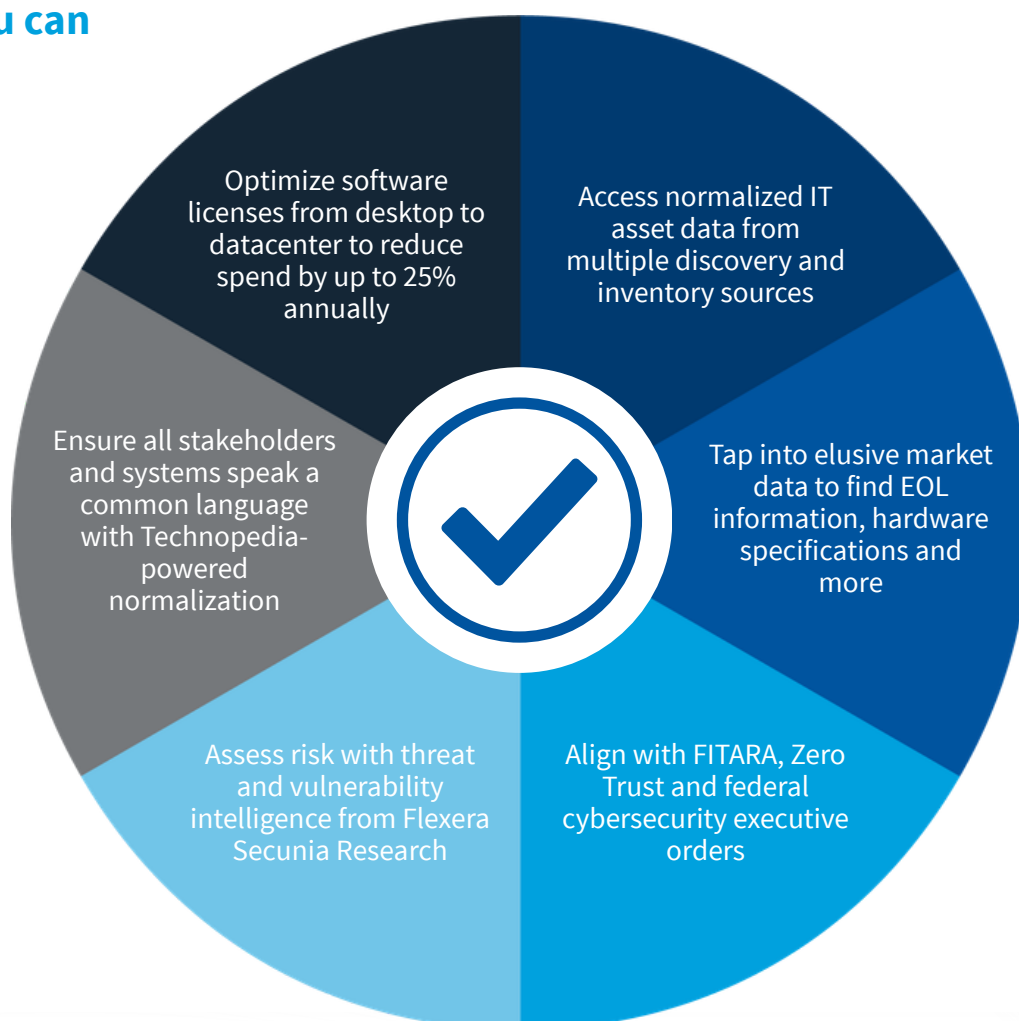

Feed normalized, enriched asset data into ServiceNow, BMC Remedy or other ITSM tools to improve CMDB quality and support better IT service delivery

Strengthen audit defense

Automate compliance reporting and reduce the time and effort spent preparing for internal, vendor and regulatory audits

Now you can

Capabilities

FlexNet Manager Suite (FNMS)

Capability	Description
Software license optimization	Automatically apply product use rights (PURs) from Microsoft, Oracle, IBM, Adobe and VMware to minimize license consumption and maximize savings
Comprehensive discovery and inventory	Agent-based and agentless discovery across Windows, Linux, UNIX and Mac, including virtual and cloud environments
License compliance reporting	Reconcile purchased vs. installed licenses using a SKU library of over 2.1 million entries to generate accurate effective license positions
Application recognition and normalization	Identify and normalize more than 2.1 million software releases from over 117,000 publishers
Contract and entitlement management	Centralized tracking of vendor contracts, renewal dates, payment schedules and entitlements
Usage metering	Track application usage to reclaim unused licenses, optimize renewals and reduce denials of service
ITSM/CMDB integration	Out-of-the-box integration with ServiceNow, BMC and other IT service management tools

Data Platform

Capability	Description
Multi-source data aggregation	Collect and reconcile data from FNMS, SCCM, Tanium, BigFix, BMC Discovery, HP Universal Discovery and other tools via optimized extractors
Technopedia-powered normalization	Map raw data to a common identity using the world's largest enriched technology catalog (5.8M+ products, 250M+ data points)
EOL and EOS intelligence	Proactively identify assets approaching EOL/EOS to plan upgrades, reduce obsolescence risk and improve security posture
Vulnerability intelligence (Secunia Research)	Expert-curated security advisories with CVSS scores, criticality ratings and threat intelligence—not just NVD data
Hardware specifications	Detailed information on power consumption, heat dissipation, dimensions, operating temperature and humidity for infrastructure planning
Certificate authentication	Standardized infrastructure support for highly secure government environments in place of password-based logins
Interactive analytics	Modern, visual analytics layer for reporting across all IT inventory data—from basic reports to interactive multi-dimensional analysis

Better together: How FNMS + Data Platform work

By utilizing both FNMS and Data Platform you get complete IT asset intelligence:

- Data Platform connects to third-party inventory sources (SCCM, Tanium, BigFix, etc.) and collects, normalizes and enriches that data
- FNMS Beacons collect inventory from the Flexera Agent, Active Directory, third-party sources and virtual cluster hypervisors
- All data is reconciled, processed and correlated against Flexera's Technopedia libraries
- FNMS delivers licensing optimization and compliance, while Data Platform delivers superior normalization, enrichment and market intelligence across the entire estate

Why does this matter for government?

Data Platform's normalization is broader and richer than FNMS normalization alone, extending beyond licensing to serve enterprise architecture, vulnerability management, EOL/EOS planning and CMDB enrichment. Together, they eliminate data silos and give your agency one trusted, defensible view of every technology asset.

Mission-focused benefits for government

Objective	How FNMS + Data Platform deliver
Reduce IT spend	Optimize licenses across all major vendors, reclaim unused software and redirect savings to mission-critical programs
Mitigate risk	Identify vulnerabilities, EOL/EOS assets and unapproved software to align with Zero Trust and cybersecurity mandates
Improve data quality	Aggregate and normalize data from every discovery source into a single, accurate and enriched IT inventory
Strengthen audit defense	Maintain continuous compliance with automated license reconciliation and defensible effective license positions
Support modernization	Leverage clean, enriched data for cloud migration planning, application rationalization and data center optimization
Meet federal mandates	Align with FITARA, executive orders, NIST, FISMA and Zero Trust architecture requirements with actionable IT intelligence

How to purchase

Leaders across the federal government are turning to Flexera to help them optimize IT usage, reduce costs, mitigate risk and align with executive orders and federal mandates. Flexera's solutions are offered through various federal, state and local contracts, as well as by small businesses supporting the government.

Turn data into mission-ready outcomes

With FlexNet Manager Suite and Data Platform, your agency gains more than visibility—you gain confidence in every decision. By unifying, normalizing and enriching your IT asset data, you can reduce cost, strengthen compliance and proactively manage risk across your entire environment.

Instead of piecing together fragmented insights, you get a single, trusted foundation for audit defense, modernization planning and cybersecurity alignment. The result is smarter decision-making, faster execution and a more resilient IT ecosystem that supports your mission today and into the future.

About Flexera

Flexera helps organizations understand and maximize the value of their technology, including the rising costs and risks introduced by AI, saving billions of dollars in wasted spend. Our Flexera One platform connects the dots between what technology you have, how it is used, what it costs, and where it creates risk, helping teams take control of the increasingly complex IT estate across cloud, SaaS and on-premises. We are leading the way to unify IT asset management, FinOps and SaaS management with high fidelity data from Technopedia, our proprietary reference library of technology asset data, and intelligent automation fueled by AI. That's why thousands of global organizations rely on the Flexera One platform and Technopedia. Learn more at flexera.com
