

Trusted IT intelligence inside every tool your teams already use

Fragmented IT operations limit visibility and control

Disconnected tools, siloed data, and unreliable AI slow decisions and increase risk:

- **IT data is spread across systems** with no unified view of assets, cost, risk and usage
- **AI lacks trusted enterprise data** and remains confined to vendor ecosystems
- **Teams must leave workflow tools** to access IT intelligence, breaking productivity

Flexera One Model Context Protocol (MCP) Server unifies data, embeds insights and enables action across any AI-powered environment.

Bring trusted IT intelligence into the flow of work:

Act reliably, instantly

Access trusted IT data and execute workflows in real time directly within Microsoft Copilot, Teams, Slack and other AI tools

Reduce risks in real time

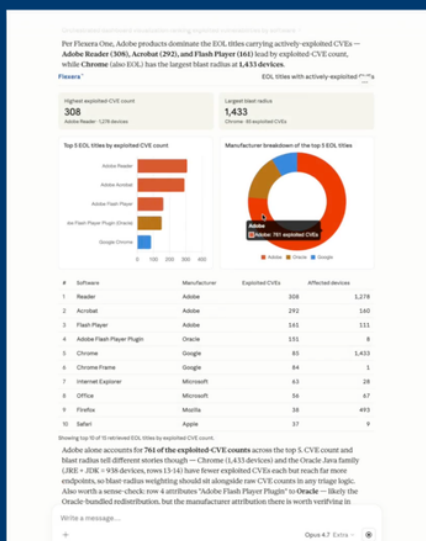

Identify and prioritize application overlap, lifecycle management and vulnerability assessment opportunities using accurate, traceable data across your entire IT estate

Unify team execution

Align IT, finance, sourcing and security with consistent insights and seamless workflows that eliminate silos and reduce operational friction

Flexera One MCP Server

The trusted system of record for IT intelligence in an AI-first enterprise:

Oversee and control technology automation

Traceable and audit ready data enabled by Technopedia

Access answers and take action without leaving your workflow

Scale prioritization across the organization

MCP Server features

Flexera One MCP Server unifies IT intelligence across domains, giving teams access to enriched inventory and risk context in one place.

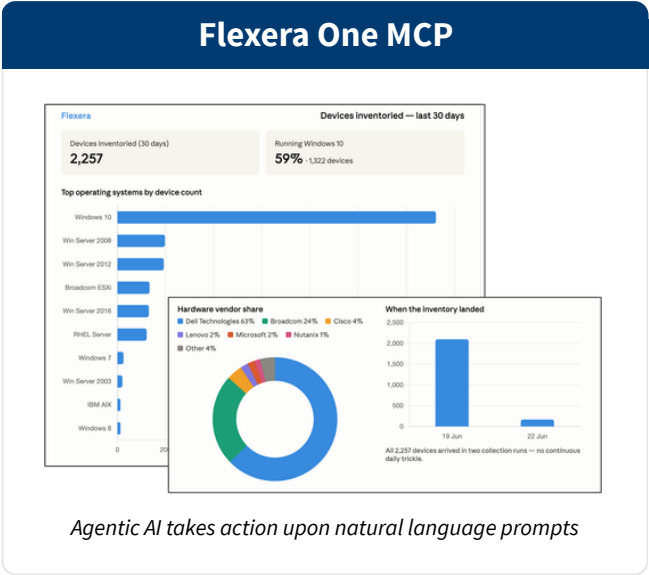

- Consistent, correlated insights across IT, finance, sourcing and security, ensuring everyone operates from the same trusted data foundation
- Insights are embedded directly into everyday tools, enabling natural language interaction and eliminating the need to switch systems
- From any host, teams can take action, including creating tickets, prioritizing remediation efforts and triggering automation workflows, all with full auditability and traceability

“

It’s a game changer. Flexera's a big data source for us, not just a reporting tool—MCP is how we open it up to everybody via the tools they work in, all the time.”

Transform access and action

Accelerate insight to action	Reduce cost and financial risk	Increase team productivity	Improve trust in AI-driven decisions
• Reduce manual data aggregation across systems • Enable real time answers and immediate execution • Turn multi hour workflows into single interactions	• Identify application sprawl and cloud waste • Improve lifecycle planning and vendor outcomes • Example outcome surfaced 1.84M in avoidable exposure during a renewal cycle	• Enable teams to work in familiar tools • Eliminate context switching and duplicate effort • Streamline collaboration across IT finance sourcing and security	• Deliver validated data with full traceability • Support compliance governance and audit requirements • Enable confident executive decision making

Proven Flexera impact:

65%

Effective savings rate with rate optimization

80%

Reduction in effort managing external audits

60%

Average reduction in time spent researching and validating data
