flexera | Spot

Product Overview

Elastigroup

# Scale mission-critical workloads on spot instances, availability guaranteed.

Get automated infrastructure management with Elastigroup, and run applications on fully optimized, highly available cloud infrastructure with up to 90% cost savings.

Elastigroup makes it easy and hands-free to reliably use spot instances with AI-driven predictions, while powerful features deliver lightening fast autoscaling, maximum cost efficiency and enterprise level availability.

> With Elastigroup we can confidently run thousands of spot instances for our core technologies.

ironSource

## Why Elastigroup

**90%**
Compute cost optimization

**Any cloud**
Supports AWS, Azure and GCP

**Seamless integrations**
Plug into the tools DevOps already use

**SLA**
Enterprise level SLA for availability

## Seamless integrations

Terraform | CloudFormation | Ansible | Chef | Puppet | Spinnaker | CodeDeploy | Beanstalk

Elastigroup

# Elastigroup use cases

Stateless

Stateful

### Batch jobs and big data

Run core and/or task nodes on spot instances for long and short running EMR clusters, ensuring zero disruption and sufficient IPs within all selected AZs.

### HPC workloads

Burst onto highly available spot instances with specific simple/target policies and HPC cluster scaling requests. Run pre/post scripts to automatically register newly created spot instances and gracefully deregister old ones.

### Cloud native load balancers

Elastigroup supports Amazon ELB/ALB and Azure Application Gateway, adding an application-aware auto scaling and prediction layer to mitigate spot interruptions while running on the most optimal compute price and size.

### CI/CD integration

The Spot-Jenkins plugin enables Jenkins jobs to automatically run on spot instances, and streamlines DevOps processes with easy configuration of Websocket.

### Elasticsearch

With data and IP persistence, instance auto-recovery, automated data, cross-AZ multiple shared environments and more, reliably utilize spot instances for highly cost-optimized Elasticsearch clusters.

### Dev machines

Elastigroup drives innovation by allowing unfettered usage of personal development machines with data and IP persistence even on spot instances. Built-in scheduling helps further reduce cost with full control over when instances run.
