Helping federal agencies gain IT intelligence

Flexera helps government agencies and programs:

- Gain situational awareness of your IT estate to quickly answer cyber spend and risk questions
- Align with Zero Trust, FITARA and IT Cyber Security executive orders and mandates
- Automate and optimize IT asset risks, costs and usage while improving data quality
- Eliminate and monitor technical debt and unapproved software in your environment
- Find and reallocate license overspend to modernization and innovation initiatives
- Perform cloud migration assessments and manage cloud spend more intelligently
- Gain insight from the world’s largest, most up-to-date and accurate IT asset data set

What you get

Now you can optimize your agency’s IT environment and gain the level of visibility needed to achieve measurable results while meeting the goals of federal initiatives.

Intelligence-driven IT visibility, risk and cost control

Nothing helps transform your IT more than complete, accurate intelligence—especially when managing a federal agency’s sprawling and vulnerable IT environment. Flexera gives you precise, accurate, comprehensive data and decision support, enabling you to monitor asset risks, reduce your total cost of ownership, and return millions of dollars back to mission-focused programs. Many agencies struggle to achieve this, forcing them to use expensive and time-consuming manual methods or partially intelligent solutions. The result: ill-informed decisions and declines in efficiency and effectiveness.

Consistently named a best-of-breed industry leader by Gartner and Forrester, Flexera allows you to turn your data into action.

- Identify and manage vulnerabilities, including IT assets past their end of life or that have common vulnerabilities and cyber risk exposures
- Remove technical debt and rationalize hardware and software applications
- Intelligently plan cloud migrations to reduce transition risks while optimizing costs
- Govern, optimize and enforce software license compliance
- Control resource allocations and investments for software and hardware
- Track IT procurement and at-risk maintenance contracts
- Optimize data center workloads to ensure effective resource and license utilization
- Manage assets throughout their lifecycle for informed financial and planning decisions
- Produce clean, normalized and enriched data for enterprise architecture initiatives

Agencies across the federal civilian, defense and intelligence sectors deploy Flexera to optimize the usage, risks and costs of their IT estate while generating substantial returns on their investments.
A multi-phase approach to building IT intelligence that creates a deeper understanding of the business services consuming IT and enables fact-based decision making

### Proven value

One large federal agency estimate showed a three-year cost reduction of more than $20 million.

Moreover, as it relates to productivity and automation benefits, an official from this civilian agency said it would take four full-time employees four years to aggregate, normalize and enrich the amount of data that Flexera’s solutions automatically did within hours.

### Solutions backed by industry analysts

Flexera is a recognized industry leader in technology value optimization across all assets and licensing types.

### How to purchase

Leaders across the federal government are turning to Flexera to help them optimize IT usage, reduce costs, mitigate risk and align with executive orders and federal mandates. Flexera solutions are available from our master reseller, Carahsoft, and small businesses contracting with the federal government.
