

Bring visibility, control and security to your SaaS ecosystem—at scale

SaaS is now the dominant software delivery model, and with it comes a new generation of challenges for IT, procurement, finance and security teams. The very benefits that make SaaS so attractive—ease of adoption, flexibility and decentralization—also create serious risks and inefficiencies if left unchecked.

Organizations face mounting pressure to:

- Track and govern decentralized SaaS purchases made by individual teams, often without IT or procurement involvement
- Control spend and eliminate waste, as unused or duplicate subscriptions silently drain budgets
- Ensure security and compliance in environments with growing shadow IT, orphaned user accounts and unmanaged cloud-to-cloud integrations
- Understand true usage and value, with limited insight into how applications are adopted, used or abandoned

As SaaS ecosystems grow in size and complexity, traditional tools and processes fall short. You need a purpose-built solution that can provide visibility, financial control and governance—all in one platform.

Regain control across the three pillars of SaaS Management

Flexera One SaaS Management is built on years of experience helping organizations manage software across hybrid IT environments. As SaaS adoption continues to accelerate, we've evolved with the market—delivering proven, mature capabilities that provide clarity, control and confidence in an increasingly complex digital landscape.

With deep integrations, robust usage analytics and intelligent automation, Flexera One SaaS Management empowers you to make smarter decisions across your entire SaaS lifecycle. Whether you're dealing with redundant tools, spiraling costs or security blind spots, Flexera helps you regain control through the three essential pillars of SaaS Management: Visibility, cost optimization, and security and governance.

Visibility: Illuminate your entire SaaS landscape

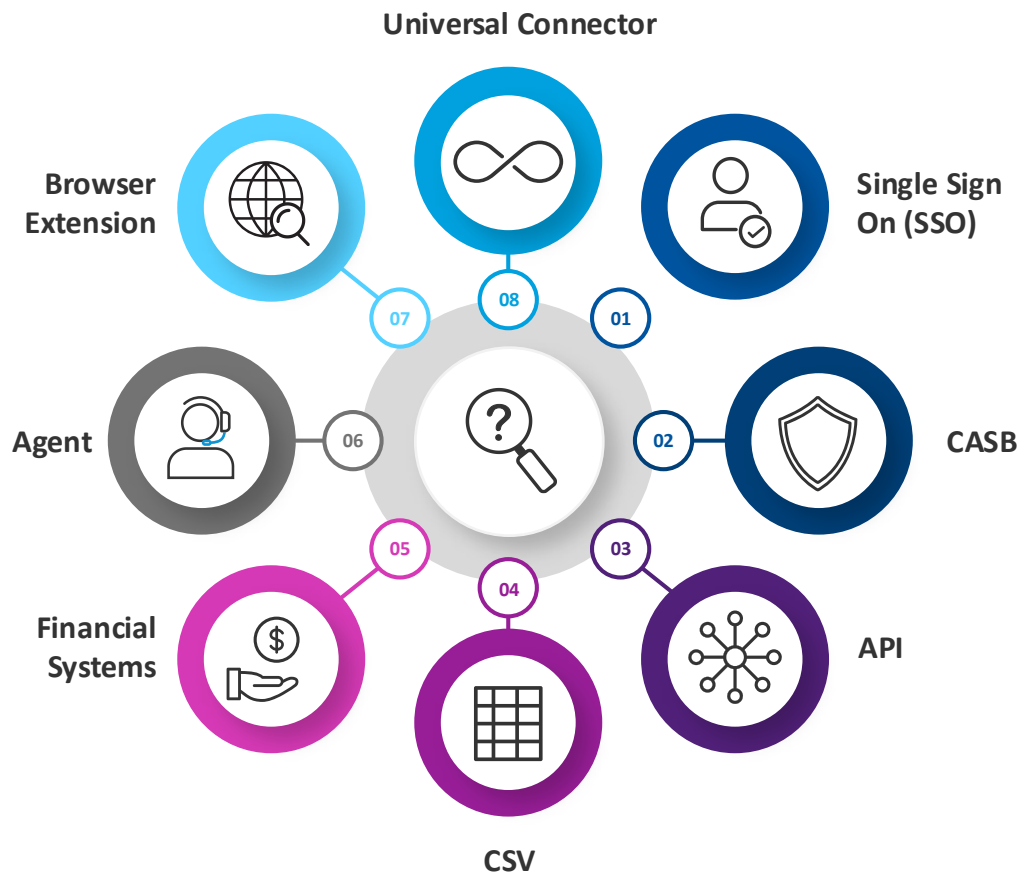

In today's distributed and remote-first workplace, it's all too easy for SaaS sprawl to go unchecked. Flexera One SaaS Management helps you shine a light into every corner of your environment—sanctioned or unsanctioned, centrally managed or not.

- **Comprehensive discovery:** Automatically identify all SaaS applications in use across your organization—including shadow IT—by connecting to finance systems, SSO providers and browser-level data
- **User-level insights:** Understand who's using what, how often and from where. Map usage to individuals,

teams and departments to improve accountability and optimize license allocation

- **Real-time analytics:** Monitor feature usage, adoption trends and user engagement to inform vendor negotiations and internal enablement strategies

Visibility is the foundation for everything else—from financial management to risk reduction. With Flexera, you'll finally have the clarity you need to make informed decisions about your SaaS estate.

Cost optimization: Maximize the value of every subscription

SaaS spending can quickly spiral out of control. Flexera One SaaS Management helps you reduce waste, eliminate redundant apps and ensure that every license is delivering value.

- **Eliminate unused licenses:** Identify underutilized or inactive subscriptions and take action with automated rightsizing recommendations
- **Rationalize redundancy:** Detect overlapping tools and consolidate services with similar functionality to streamline procurement and reduce spend
- **Unify procurement visibility:** See all SaaS spend, regardless of how it was purchased—centrally or by business units—so you can manage costs holistically and fairly

SaaS should empower your teams, not drain your budget. Flexera ensures that your investments are aligned with actual usage and business need.

Security and governance: Protect data, enforce policy and reduce risk

SaaS adoption introduces new governance challenges, including expanded attack surfaces, orphaned accounts, unmanaged integrations and compliance blind spots. Flexera One SaaS Management helps you manage SaaS securely and responsibly.

- **Access management:** Detect external users and manage permissions to prevent data leaks or unauthorized access. Ensure former employees are deprovisioned promptly
- **Shadow IT mitigation:** Bring unsanctioned tools under governance with visibility into app usage across all endpoints—even personal devices
- **Cloud-to-cloud integration monitoring:** Identify risky inter-app integrations and ensure compliance with security policies and frameworks
- **Compliance confidence:** Meet regulatory requirements by maintaining control over sensitive data flows and documenting SaaS usage and access

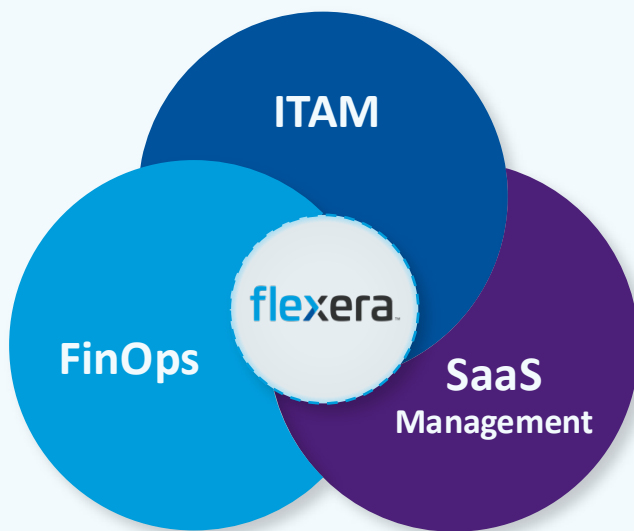

Security isn't a bolt-on. It's built into every stage of the SaaS lifecycle with Flexera.

Why Flexera? We're built for the modern enterprise

Flexera One SaaS Management isn't a new experiment—it's the result of a mature, integrated approach to software asset management in the cloud era. As ITAM, FinOps and SaaS operations converge, you need solutions that bridge these disciplines rather than silo them.

Flexera's SaaS Management capabilities are embedded within the Flexera One platform, giving you a single system of record for hybrid IT, a foundation for FinOps maturity and the visibility required to manage risk across the full software estate.

Combined value is unrivalled

Take control of SaaS at scale

SaaS isn't slowing down—and neither are the risks and inefficiencies it introduces. Flexera One SaaS Management gives you the tools to tame SaaS complexity, reduce unnecessary spend and operate securely.

Whether your priorities are financial, operational or security-focused, Flexera brings them into alignment so you can optimize, govern and thrive in the cloud-first era.

About Flexera

Flexera helps organizations understand and maximize the value of their technology, saving billions of dollars in wasted spend. Powered by the Flexera Technology Intelligence Platform, our award-winning IT asset management, FinOps and SaaS management solutions provide comprehensive visibility and actionable insights on an organization's entire IT ecosystem. This intelligence enables IT, finance, procurement and cloud teams to address skyrocketing costs, optimize spend, mitigate risk and identify opportunities to create positive business outcomes.

More than 50,000 global organizations rely on Flexera and its Technopedia reference library, the largest repository of technology asset data. Learn more at flexera.com.
